# **Executive Summary**

This Single Electricity Market Operator's (SEMO) report covers the month of operation of April 2017 and is published in accordance with the Single Electricity Market (SEM) Committee decision and Clause 2.144 of the Trading and Settlement Code.

During the month of April 2017, there were no late Settlement publications as per the Trading and Settlement code.

During the month of April 2017, there were no late publications of the Credit Report as per the Trading and Settlement code timelines.

There were 14 defaults by Participants during April 2017. The largest of these was a Capacity M+4 Nov 2016 invoice for €250.81 which was remedied the same day.

There were no Credit Cover Increase defaults during April 2017 as per the Trading and Settlement code timelines.

145 general queries were received in April 2017. During the same period 156 general queries were resolved.

Formal queries continue to be answered well within the timelines stipulated in the Trading and Settlement Code.

.,	_	
Κ	ev	:

- Major Breach late publishing of invoices, default notices issued for non-payment or similar.
- Minor Breach deadlines not met, but no financial implication to Participants. This includes late posting of pricing and settlement runs.

## **Joining and Terminating Parties and Units**

No parties joined the Market in April 2017.

There were no terminating parties in April 2017.

The following units went effective in the Market in April 2017.

- PT\_400050\_Viridian Energy Limited GU\_402010 Ballybane Windfarm Phase 3

#### **Total Balancing Costs**

Balancing Costs arise in the Energy and Capacity markets when the summed payments to the SEM from Participants in respect of their Supplier Units do not meet the summed payments to Participants from the SEM in respect of their Generator Units.

Although, it is intended the Energy Payments and Energy Charges should be balanced through the mechanism of the Error Supplier Unit in each jurisdiction, because Energy Payments are made against Market Schedule Quantities while the Error Supplier Unit volumes are calculated against Metered Generation, the different application of Loss Factors means that there is frequently an imbalance between the Energy Payments and Energy Charges.

With regard to the Energy Settlement, the Balancing Costs have been calculated as follows for the entire month:

**Table 4 - Balancing Costs for Energy Settlement** 

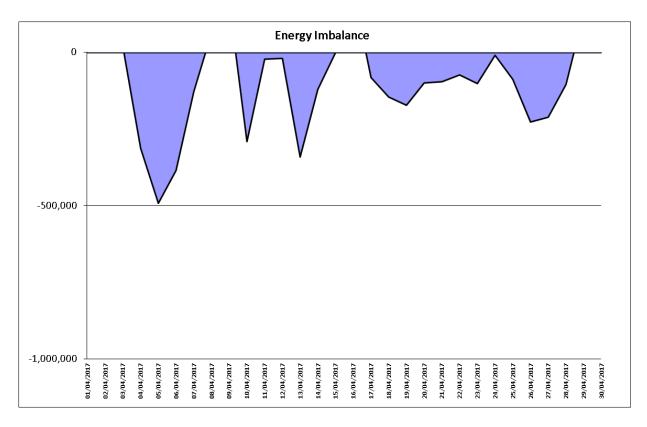

Figure 3 – Energy Imbalances

The full Balancing Cost of the SEM is determined by the summation of the daily payment amounts for Energy Imbalance, Constraint Payments, Uninstructed Imbalance Payments, and

Imperfections Charges combined with the weekly Make Whole Payments and Testing Charges.

Historical values for testing charges have been provided in Appendix E.

The figures for the full Balancing Cost of the SEM since the last Market Operator report are shown below, as well as the VAT Balancing Costs.

In tables 5 and 6 below:

- Positive values indicate Payments were greater than Charges.
- Negative values indicate Charges were greater than Payments.

Date Of Invoice	Week No	SEM Balancing Costs	VAT Balancing Costs
07/04/2017	13	€1,422,792.08	€0
14/04/2017	14	€1,323,499.99	€0
21/04/2017	15	€1,281,924.95	€0
28/04/2017	16	€917,452.61	€0

**Table 5 - Balancing Costs for Trading Payments and Charges** 

SEM Balancing Costs are provided based on daily exchange rates, VAT Balancing Costs are based on the Invoicing day exchange rate. VAT Balancing costs exclude Currency Cost related VAT.

It is intended that the algorithms set out in the Trading and Settlement Code will lead to a balanced Capacity Market. However, rounding precisions within the systems may result in an imbalance being introduced into the equations. This imbalance may lead to funding requirements to ensure that all payments out are made as per the terms of the Trading and Settlement Code.

With regard to the Capacity Settlement, the Balancing Costs have been as follows:

April 2017				
Capacity Charges	-39,374,523.08			
Capacity Payments	39,374,290.38			
Balancing Costs	-232.70			
VAT	€0			

**Table 6 - Balancing Costs for Capacity Settlement** 

Historical figures, the current financial year full Balancing Costs for both Trading and Capacity are provided in Appendix H. VAT Balancing costs exclude Currency Cost related VAT.

#### **Total Currency Costs**

Currency Costs in the SEM are calculated with respect to the difference in Exchange Rates due to two components:

- 1) Invoice Currency Costs: in respect of the difference between the Trading Day Exchange Rate (and Annual Capacity Exchange Rate in respect of Capacity Settlement) and the Exchange Rate on the Date of Invoice (being the date of issue of the Invoice) for Trading Payments and Charges.
- 2) Payment Period Currency Costs: in respect of the difference between the Exchange Rates between the Date of Invoice and the Date of Payment.

Although the Trading and Settlement Code uses the term Currency Cost, the currency differences may end up as a benefit or a cost to the Participant depending on how the Exchange Rate fluctuates between the Billing Period, Invoice Date and Payment Date. In the table below, where this value is positive this means there was an overall benefit to Participants, negative values mean there was an overall cost to Participants resulting from trading in two currencies. Figures are shown in Sterling (£).

Last Date Of Billing Period	Date Of Invoice	Week No	Currency Costs For Energy Settlement (Invoice and Payment)	Currency Cost Adjustment for Inter- jurisdictional SRAs	Total Currency Cost
01/04/2017	07/04/2017	13	-£3,239.11	£-	-£3,239.11
08/04/2017	14/04/2017	14	-£6,836.45	£-	-£6,836.45
15/04/2017	21/04/2017	15	-£13,678.49	£-	-£13,678.49
22/04/2017	28/04/2017	16	-£4,915.60	£-	-£4,915.60

**Table 7 - Total Currency Costs for Trading Payments and Charges** 

The Total Currency Cost figures detailed above show the Currency Cost for each Billing Period including Invoice Currency Costs, Payment Period Currency Costs, and Inter-jurisdictional SRA Currency Costs.

Over the period of this report Currency Costs for each week represented a benefit to Participants of up to £-3,239.11 and a cost to Participants of up to £-13,678.49. Whether Currency Costs are a cost or benefit to Participants is directly related to whether the currency is rising or falling between the billing period, invoice date and payment dates.

Settlement Reallocation Agreements between the two currency zones continue to present volatility in the Currency Costs that appear in the Energy market each week. The value of these adjustments is detailed separately above in each Billing Period.

The Currency Costs, for the current financial year, with respect to Initial Capacity Settlement are set out below. Figures are shown in Sterling (£).

Date Of Invoice	Capacity Month	Currency Costs For Capacity Settlement
11/04/2017	April 2017	£3,162.94

**Table 8 - Total Currency Costs for Capacity Payments and Charges** 

## **Cumulative Imperfections Costs Vs Budget**

The value of Cumulative Imperfections Costs Vs Budget is calculated as the sum of Total Constraint Payments, Total Uninstructed Imbalance Payments, Total Testing Charges and Total Make Whole Payments, as compared against the Total Imperfections Charges, being the weekly budget for these Imperfections Costs.

These values have been collected across the months since the start of the new financial year, 1st October 2016. The values expressed in Euros are as follows.

This table makes use of the values taken from the Initial Settlement Run of Trading payments and charges.

Total Constraint Payments	Total Uninstructed Imbalance	Total Make Whole Payments	Total Imperfections
€100,663,433.04	-€2,196,036.98	€1,842,478.02	-€41,556,464.63

Table 9 – Cumulative Imperfections Costs Vs Budget

Note: The Total Constraints Payment figure above has been updated to contain Interconnector Unit Gate variables.

This is demonstrated in the figure below.

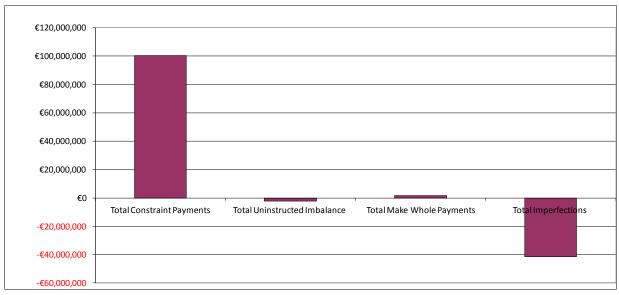

Figure 4 - Cumulative Imperfections Costs Vs Budget

The daily and weekly data that comprised these values is shown in Appendix E.

# **Financial Changes between Initial Settlement and Subsequent Reruns**

The following graphs provide a breakdown of resettlement amounts for the M+4 resettlement period of December 2016 and M+13 resettlement period of March 2016 for Energy and Capacity.

# 3.1.1 Energy Market

Note: - For Figure 6, 8, 9, net values are shown.

- Positive amounts indicate net additional payments by Participants (Charges).
- Negative amounts indicate net additional payment to be made <u>to</u> Participants (Payments).

The reverse is true for Figure 7 & 10

# M+4 Resettlement

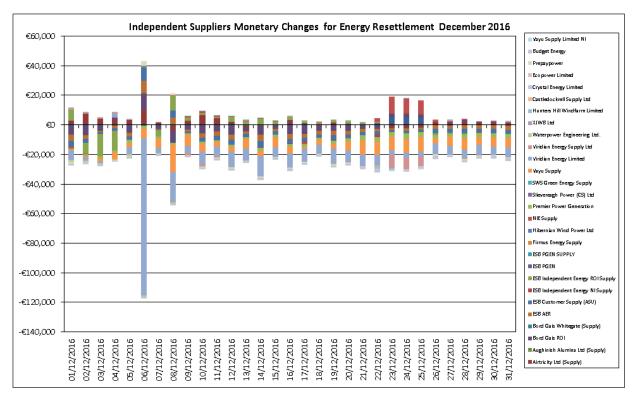

Figure 5 – Independent Suppliers Monetary Changes for Energy Resettlement –

December 2016

The above variances relates purely to rounding for Participants between Initial and M+4 Resettlement.

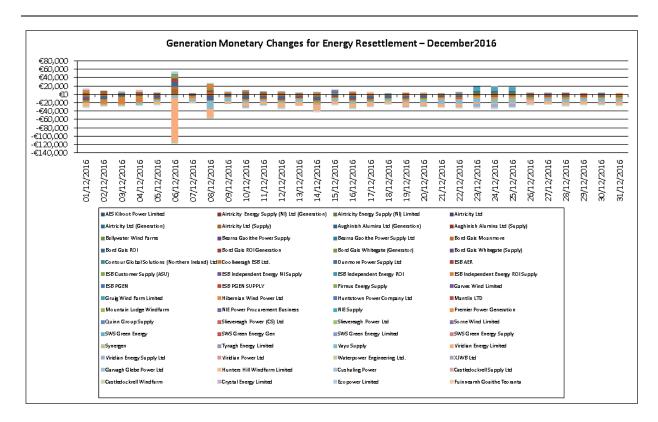

Figure 6 – Generation Monetary Changes for Energy Resettlement – December 2016

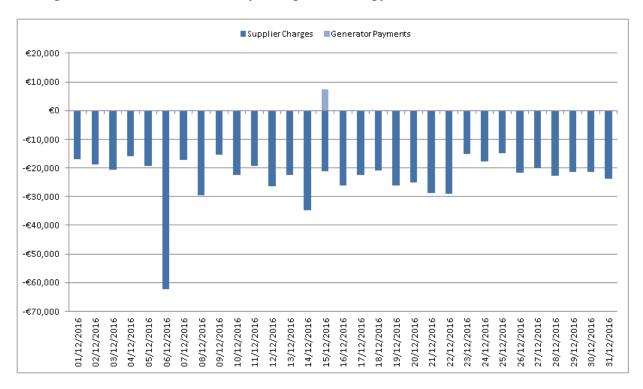

Figure 7 – Total Monetary Changes for Energy Resettlement – December 2016

# M+13 Resettlement

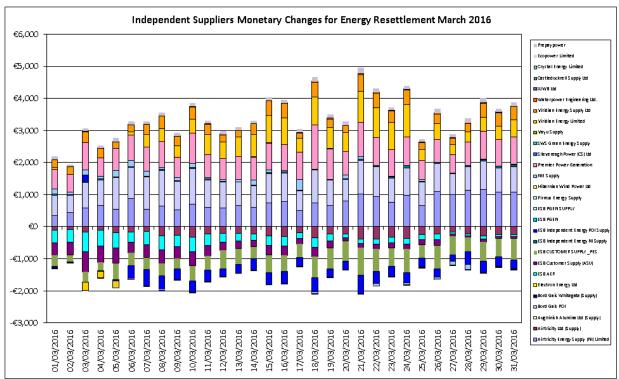

Figure 8 - Independent Suppliers Monetary Changes for Energy Resettlement – March 2016

The above variances relates purely to rounding for Participants between M+4 and M+13 Resettlement.

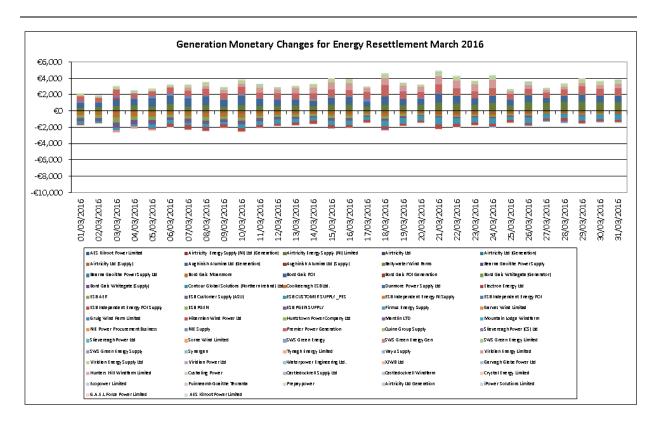

Figure 9 - Generation Monetary Changes for Energy Resettlement - March 2016

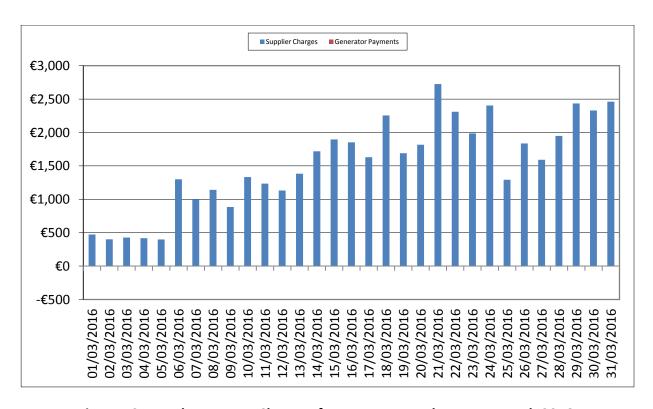

Figure 10 - Total Monetary Changes for Energy Resettlement – March 2016

#### 3.1.2 Capacity Market

Note: - For Figure 12, 13 & 16 net values are shown.

- Positive amounts indicate net additional payments by Participants (Charges).
- Negative amounts indicate net additional payment to be made to Participants (Payments)

The reverse is true for Figure 14 & 22.

The changes in Capacity are graphed below showing the variance in monetary terms as opposed to percentage terms. As the Jurisdictional Error Supply Units can be significantly affected by resettlement, this is more reflective of the monetary redistribution in M+4 and M+13. Please also note that as of June 2011 the Jurisdictional Error Supply Unit (ROI) is now a Retail Supply unit. The Jurisdictional Error Supply Unit (NI) is unchanged.

#### M+4 Resettlement

Under resettlement, charges originally attributed to the Jurisdictional Error Supplier Units, have now been redistributed among Market Participants.

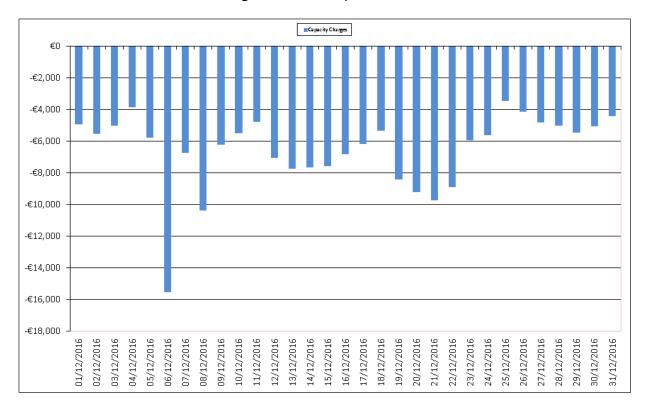

Figure 11 - Independent Suppliers Monetary Changes for Capacity Resettlement – December 2016

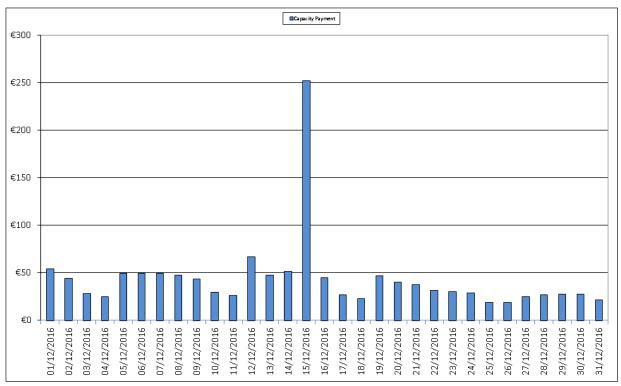

Figure 12 - All Generation Monetary Change for Capacity Resettlement – December 2016

The changes above are driven by updated meter data for Autonomous Price Taker Generators.

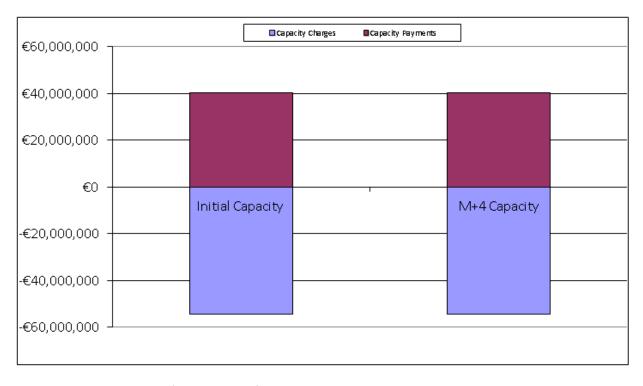

Figure 13 - Comparison of Distribution of Monetary Amounts between Capacity Initial and Resettlement December 2016

The above graph demonstrates that due to all the individual changes to payment and charge amounts on a Supplier or Generator Unit basis, the overall Capacity Market resettlement Charge and Payment amounts have not changed due to resettlement.

Table 10 – Helpdesk Statistics

#### Definitions:

- Resolved within the Period refers to queries raised and resolved within the calendar month of April 2017.
- Resolved in the Period refers to queries resolved within April 2017, and includes queries raised before this time.
- Resolution Time (Working Days) refers to average time to resolve, in working days, for this category of query. It is calculated based on all queries for the category, not just April 2017.
- Not Resolved refers to queries raised but not resolved within April 2017.
- Urgent are general queries which may have an impact on market operations. SEMO
  has an internal objective to resolve these within 3 working days; however, this is not a
  mandated service level under the Trading and Settlement Code.
- Disputes are where a dispute has been raised over the outcome of a data or settlement query.

The average resolution time for General Queries has decreased by 1.38 working days from 2.40 in March 2017 to 1.02 working days in April 2017. SEMO has a metric to resolve General Queries within 20 Working Days. These include queries received over the phone and e-mail.

Data and Settlement Queries generally continue to be responded to within the timelines required by the Trading and Settlement Code, i.e. one calendar month. No Formal Query

timeline Queries.	were	required	during	April	2017	with	regard	to	formal	Settlement

# **Disputes and Queries**

## 5.1.1 Disputes

No Dispute was raised during the month of April 2017.

## 5.1.2 Data Queries

There were no formal data queries raised during the month of April 2017.

#### 5.1.3 Settlement Queries

There were nine formal Settlement queries raised in April 2017. Seven queries were upheld and have been resolved.

Topic	Number Of Queries
Availability	1
Dispatch Instructions	1
SO Trades	2
Meter Generation	3

Table 11 – Upheld Settlement Queries by Topic

- One query relating to Availability was raised. No Material Impact on upheld query.
- One query relating to Dispatch Instructions was raised. This has been deemed to be of Low Materiality and will be corrected within M+13 Resettlement.
- Two queries relating to SO Trades were raised. These were deemed to be of Low Materiality and will be corrected within M+4 Resettlement.
- Three queries relating to Meter Generation were raised. These were deemed to be of Low materiality and will be corrected within M+13 Resettlement

#### **Unresolved Queries**

There is one unresolved settlement query as of the 12<sup>th</sup> May 2017

A full list of all the Data and Settlement queries raised is contained in Appendix B.

# **Central Systems**

# 6.1 Proportion of Default Data Used

On review of the Commercial Offer Data used in the MSP runs, 66.12% of data used was submitted by Participants through the normal Bid-Offer process. 33.88% of the data used was based on Standing Commercial Offer Data. 0.0% of the data used was based on adjusted offer data. None of the data used was based on Default Commercial Offer Data (Default differs from Standing in that it is based on the initial Default data submitted during registration process and not on more recent Standing Data submitted by the Participant through the Market Participant Interface). Details by unit are provided in <u>Appendix F</u>.

## 6.2 Proportion of Estimated Meter Data used in Initial Settlement and Resettlement

This is not calculable presently.

## 6.3 List of System Errors and Re-runs

Details are provided in Appendix C: List of All Systems Errors and Failures

## 6.3.1 Re-Pricing / Resettlement Runs /MIUN Delays

There were no Re-Price runs carried out in April 2017.

There were no Ad hoc Re-Settlement runs carried out in April 2017.

There was a delay to the publication of WD1 MIUNs for Trade Date 13/04/2017.

#### 6.3.2 System Errors

There were no Market Application defects found in April 2017.

Details are provided in Appendix C: List of All Systems Errors and Failures

# **6.4 Operational Timings**

This section lists the operation timings of MSP software runs and Settlement runs.

There are five run types for MSP software,

- Ex-Ante 1 Indicative, run on Trading Day 1 calendar day,
- Ex-Ante 2 Indicative, run on Trading Day 1 calendar day,
- With In Day 1 Indicative, run on Trading Day,
- Ex-Post Indicative, run on Trading Day + 1 calendar day, and
- Ex-Post Initial, run on Trading Day + 4 calendar days.

The following tables and graphs provide details for the postings of the MSP for April 2017.

#### 6.4.2 MSP Algorithms

The Market Operator has two different certified solvers used to determine Unit Commitment. These solvers use the Lagrangian Relaxation (LR) and Mixed Integer Programming (MIP) methodologies.

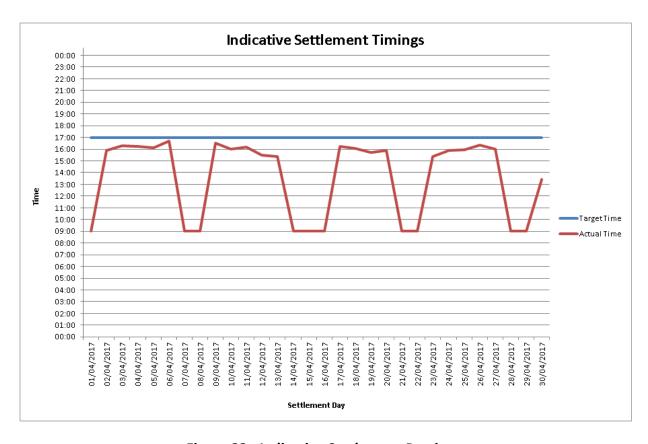

The primary solver used in the SEM is Lagrangian Relaxation (LR). Under certain schedule outcomes where a significant pricing event is observed, the MSP software is re-run using the Mixed Integer Programming (MIP) solver. The outcomes of the two solvers are compared. Where solution determined using the MIP solver provides a better overall solution, this solution may be selected for publishing. An updated policy document on the use of MIP has been published and is available on the SEMO website <a href="https://example.com/here-running-member-selected-running-member-selected-running-member-selected-running-member-selected-running-member-selected-running-member-selected-running-member-selected-running-member-selected-running-member-selected-running-member-selected-running-member-selected-running-member-selected-running-member-selected-running-member-selected-running-member-selected-running-member-selected-running-member-selected-running-running-member-selected-running-running-running-member-selected-running-ru

In April 2017, there were 6 instances of publishing with the MIP solver.

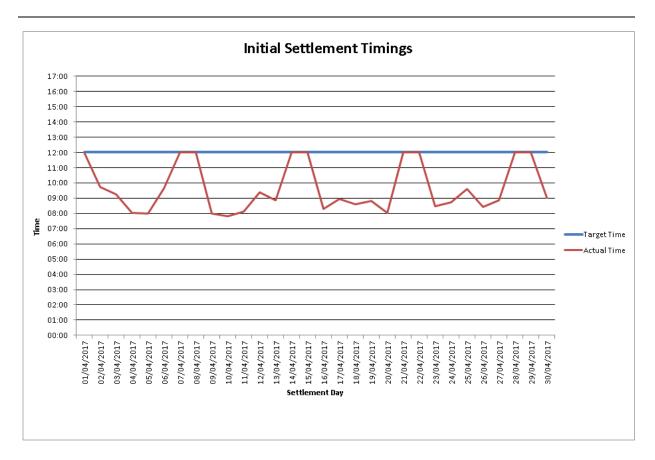

A detail of historical runs and dates where the MIP algorithm has been used for published results is provided in <u>Appendix I</u>.

# 1.4.1 Settlement Postings April 2017

The publication timings for Settlement runs are provided below.

### 9. Appendix C: List of All System Errors and Failures

The definitions of the statuses used for the List of All System Errors and Failures are:

- In Progress: Fix being identified and implemented.
- Resolved: Fix has been implemented, but reruns have not been performed.
- Closed: Required reruns have been performed and error-failure has been completely rectified.

Note: Items in the List of All System Errors and Failures that have status 'Closed' in this month's report will not appear in subsequent Monthly Market Operator Reports as they are no longer open issues.

There were no Market Application defects found in April 2017.

## **Appendix E: Imperfections Charge**

This appendix provides daily data for the Constraint Payments, Uninstructed Imbalance Payments and Imperfections Charges, and as well as the weekly values of Make Whole Payments and Testing Charges.

The following table is updated to take account of the values calculated in the Initial Settlement runs only.

Historical information will be shown in Appendix E until completion of the current financial year. Information prior to that can be found in previous Monthly Market Operator Reports.

## **Appendix H: Full Balancing Costs**

Historical figures for full Balancing Costs of both the Trading and Capacity Markets, for the current financial year (October to September), are provided below. Information related to periods before this is available in previous Monthly Market Operator Reports.

- Positive values indicate Payments were greater than Charges.
- Negative values indicate Charges were greater than Payments.

### **Appendix I: MSP Algorithms**

The Market Operator has two different certified solvers used to determine Unit Commitment. These solvers use the Lagrangian Relaxation (LR) and Mixed Integer Programming (MIP) methodologies.

The primary algorithm used in the SEM is Lagrangian Relaxation (LR). Under certain schedule outcomes this solution is compared to results achieved using MIP. The SEMO policy on the use of MIP has been updated and is available from the SEMO website <u>here</u>.

Historical information on runs and dates where the MIP algorithm has been used for published results is provided below.
