## **Total Balancing Costs**

Balancing Costs arise in the Energy and Capacity markets when the summed payments to the SEM from Participants in respect of their Supplier Units do not meet the summed payments to Participants from the SEM in respect of their Generator Units.

Although, it is intended the Energy Payments and Energy Charges should be balanced through the mechanism of the Error Supplier Unit in each jurisdiction, because Energy Payments are made against Market Schedule Quantities while the Error Supplier Unit volumes are calculated against Metered Generation, the different application of Loss Factors means that there is frequently an imbalance between the Energy Payments and Energy Charges.

With regard to the Energy Settlement, the Balancing Costs have been calculated as follows for the entire month:

#### Figure 3 – Energy Imbalances

The full Balancing Cost of the SEM is determined by the summation of the daily payment amounts for Energy Imbalance, Constraint Payments, Uninstructed Imbalance Payments, and Imperfections Charges combined with the weekly Make Whole Payments and Testing Charges.

Historical values for testing charges have been provided in <u>Appendix E</u> .

The figures for the full Balancing Cost of the SEM since the last Market Operator report are shown below, as well as the VAT Balancing Costs.

In tables 5 and 6 below:

- Positive values indicate Payments were greater than Charges.
- Negative values indicate Charges were greater than Payments.

Date Of Invoice	Week No	SEM Balancing Costs	VAT Balancing Costs
05/01/2016	51	€1,134,591.97	-€0
08/01/2016	52	€615,047.23	-€0
15/01/2016	1	€1,273,552.21	-€0
22/01/2016	2	€1,174,521.30	-€0
29/01/2016	3	€504,528.98	-€0

Table 5 - Balancing Costs for Trading Payments and Charges

SEM Balancing Costs are provided based on daily exchange rates, VAT Balancing Costs are based on the Invoicing day exchange rate. VAT Balancing costs exclude Currency Cost related VAT.

It is intended that the algorithms set out in the Trading and Settlement Code will lead to a balanced Capacity Market. However, rounding precisions within the systems may result in an imbalance being introduced into the equations. This imbalance may lead to funding requirements to ensure that all payments out are made as per the terms of the Trading and Settlement Code.

With regard to the Capacity Settlement, the Balancing Costs have been as follows:

January 2016		
Capacity Charges	-€53,607,372.5	
Capacity Payments	€53,607,006.54	
Balancing Costs	-€365.96	
VAT	€0	

**Table 6 - Balancing Costs for Capacity Settlement** 

Historical figures, the current financial year full Balancing Costs for both Trading and Capacity are provided in <u>Appendix H</u>. VAT Balancing costs exclude Currency Cost related VAT.

## Total Currency Costs

Currency Costs in the SEM are calculated with respect to the difference in Exchange Rates due to two components:

1) Invoice Currency Costs: - in respect of the difference between the Trading Day Exchange Rate (and Annual Capacity Exchange Rate in respect of Capacity Settlement)

and the Exchange Rate on the Date of Invoice (being the date of issue of the Invoice) for Trading Payments and Charges.

2) Payment Period Currency Costs: - in respect of the difference between the Exchange Rates between the Date of Invoice and the Date of Payment.

Although the Trading and Settlement Code uses the term Currency Cost, the currency differences may end up as a benefit or a cost to the Participant depending on how the Exchange Rate fluctuates between the Billing Period, Invoice Date and Payment Date. In the table below, where this value is positive this means there was an overall benefit to Participants, negative values mean there was an overall cost to Participants resulting from trading in two currencies. Figures are shown in Sterling (£).

Last Date Of Billing Period	Date Of Invoice	Week No	Currency Costs For Energy Settlement (Invoice and Payment)	Currency Cost Adjustment for Inter- jurisdictional SRAs	Total Currency Cost
26/12/2015	05/01/2016	51	£ 44,303.27	£-	£44,303.27
02/01/2016	08/01/2016	52	£21,526.21	£-	£21,526.21
09/01/2015	15/01/2016	1	-£10,192.30	£-	-£10,192.30
16/01/2016	22/01/2016	2	£20,460.21	£-	£20,460.21
23/01/2016	29/01/2016	3	£15,616.30	£-	£15,616.30

 Table 7 - Total Currency Costs for Trading Payments and Charges

The Total Currency Cost figures detailed above show the Currency Cost for each Billing Period including Invoice Currency Costs, Payment Period Currency Costs, and Inter-jurisdictional SRA Currency Costs.

Over the period of this report Currency Costs for each week represented a benefit to Participants of up to £44,303.27 and a cost of -£10,192.30. Whether Currency Costs are a cost or benefit to Participants is directly related to whether the currency is rising or falling between the billing period, invoice date and payment dates.

Settlement Reallocation Agreements between the two currency zones continue to present volatility in the Currency Costs that appear in the Energy market each week. The value of these adjustments is detailed separately above in each Billing Period.

The Currency Costs, for the current financial year, with respect to Initial Capacity Settlement are set out below. Figures are shown in Sterling (f).

Date Of Invoice	Capacity Month	Currency Costs For Capacity Settlement
12/01/2016	Dec 2015	£82,074.97

#### Table 8 - Total Currency Costs for Capacity Payments and Charges

### **Cumulative Imperfections Costs Vs Budget**

The value of Cumulative Imperfections Costs Vs Budget is calculated as the sum of Total Constraint Payments, Total Uninstructed Imbalance Payments, Total Testing Charges and Total Make Whole Payments, as compared against the Total Imperfections Charges, being the weekly budget for these Imperfections Costs.

These values have been collected across the months since the start of the new financial year, 1st October 2015. The values expressed in Euros are as follows.

This table makes use of the values taken from the Initial Settlement Run of Trading payments and charges.

Total Constraint	Total Uninstructed	Total Make Whole	
Payments	Imbalance	Payments	Total Imperfections
€65,007,135.07	-€1,886,622.16	€586,996.48	-€51,708,756.83

Table 9 – Cumulative Imperfections Costs Vs Budget

Note: The Total Constraints Payment figure above has been updated to contain Interconnector Unit Gate variables.

This is demonstrated in the figure below.

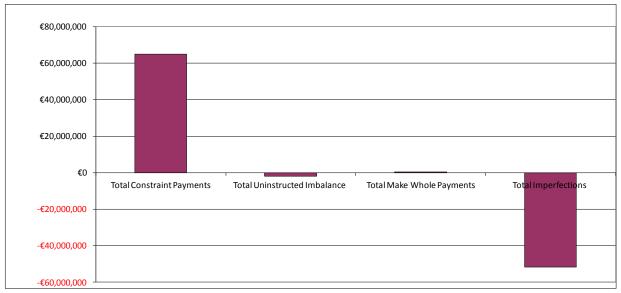

Figure 4 - Cumulative Imperfections Costs Vs Budget

The daily and weekly data that comprised these values is shown in <u>Appendix E</u>.

#### Financial Changes between Initial Settlement and Subsequent Reruns

The following graphs provide a breakdown of resettlement amounts for the M+4 resettlement period of September 2015 and M+13 resettlement period of December 2014 for Energy and Capacity.

## 3.1.1 Energy Market

Note: - For Figure 6, 8, 9, net values are shown.

- Positive amounts indicate net additional payments by Participants (Charges).
- Negative amounts indicate net additional payment to be made <u>to</u> Participants (Payments).

The reverse is true for Figure 7 & 10

#### M+4 Resettlement

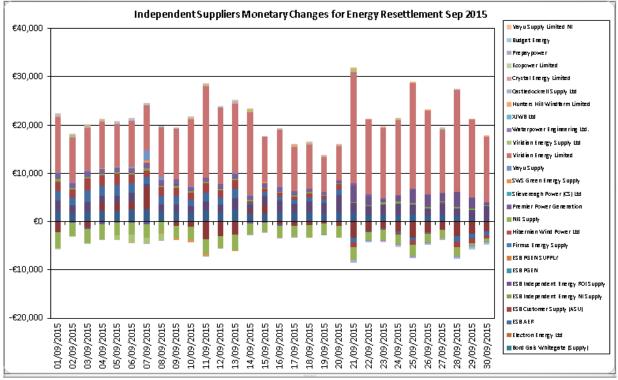

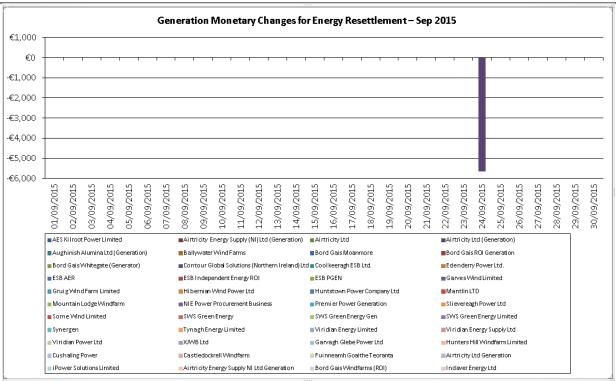

Figure 5 – Independent Suppliers Monetary Changes for Energy Resettlement – Sep 2015

The above variances relates purely to rounding for Participants between Initial and M+4 Resettlement.

### Market Operator Monthly Report

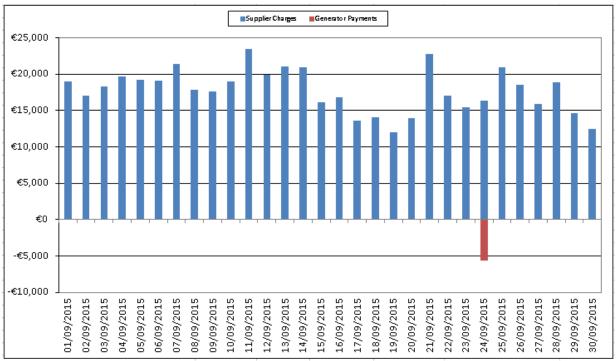

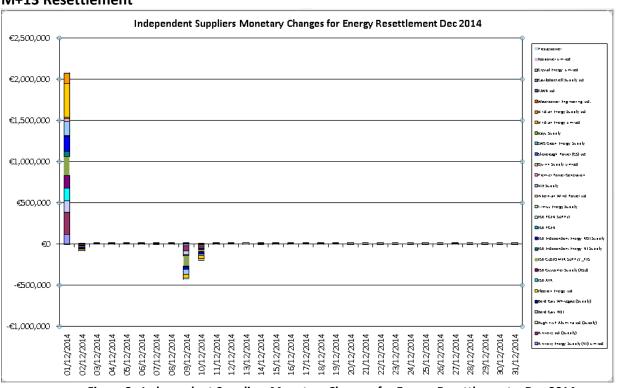

Figure 7 – Total Monetary Changes for Energy Resettlement – Sep 2015

#### M+13 Resettlement

Figure 8 - Independent Suppliers Monetary Changes for Energy Resettlement – Dec 2014

The above variances relates purely to rounding for Participants between M+4 and M+13 Resettlement. Trade Dates 1<sup>st</sup> and 09<sup>th</sup> December 2014 were repriced between M+4 and M+13 and this is reflected in these graphs.

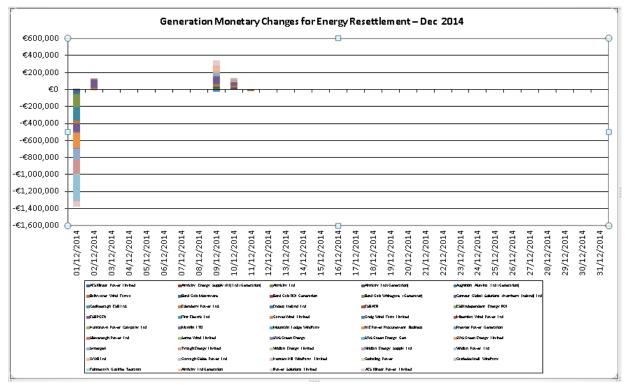

Figure 9 - Generation Monetary Changes for Energy Resettlement – Dec 2014

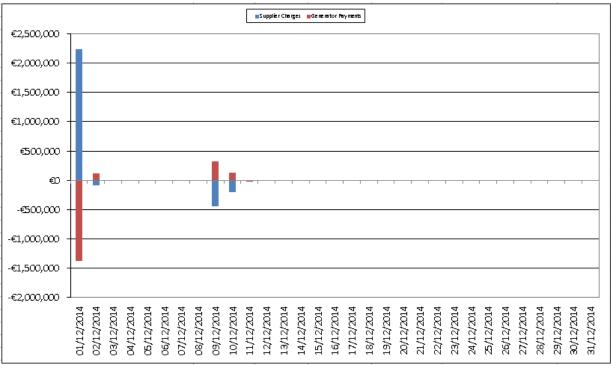

Figure 10 - Total Monetary Changes for Energy Resettlement – Dec 2014

## 3.1.2 Capacity Market

Note: - For Figure 12, 13 & 16 net values are shown.

- Positive amounts indicate net additional payments by Participants (Charges).
- Negative amounts indicate net additional payment to be made <u>to</u> Participants (Payments)

The reverse is true for Figure 14 & 22.

The changes in Capacity are graphed below showing the variance in monetary terms as opposed to percentage terms. As the Jurisdictional Error Supply Units can be significantly affected by resettlement, this is more reflective of the monetary redistribution in M+4 and M+13. Please also note that as of June 2011 the Jurisdictional Error Supply Unit (ROI) is now a Retail Supply unit. The Jurisdictional Error Supply Unit (NI) is unchanged.

## M+4 Resettlement

Under resettlement, charges originally attributed to the Jurisdictional Error Supplier Units, have now been redistributed among Market Participants.

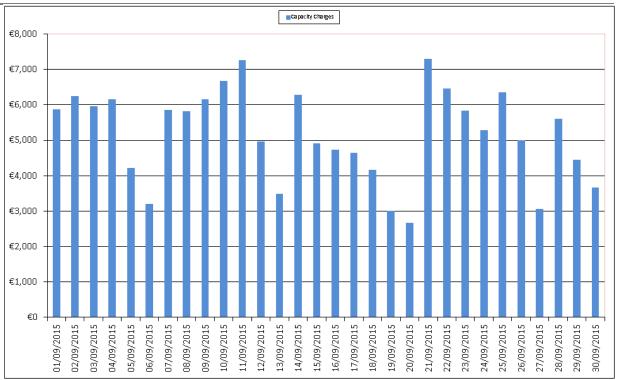

Figure 11 - Independent Suppliers Monetary Changes for Capacity Resettlement – Sep 2015

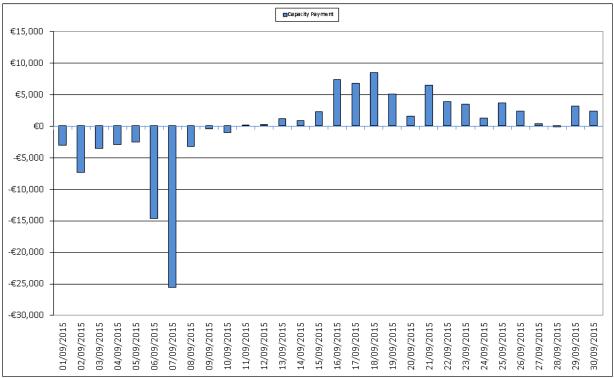

Figure 12 - All Generation Monetary Change for Capacity Resettlement – Sep 2015

The changes above are driven by updated meter data for Autonomous Price Taker Generators.

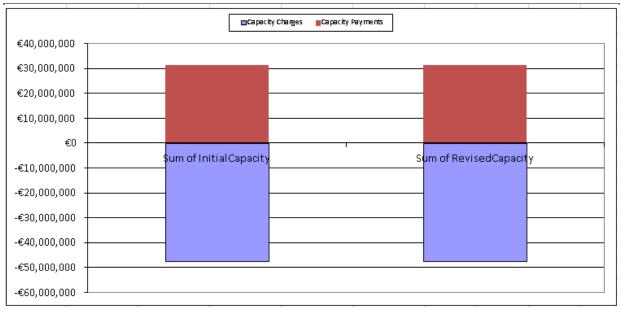

Figure 13 - Comparison of Distribution of Monetary Amounts between Capacity Initial and Resettlement Sep 2015

The above graph demonstrates that due to all the individual changes to payment and charge amounts on a Supplier or Generator Unit basis, the overall Capacity Market resettlement Charge and Payment amounts have not changed due to resettlement.

Figure 14 - Independent Suppliers Monetary Changes for Capacity Resettlement – Dec 2014

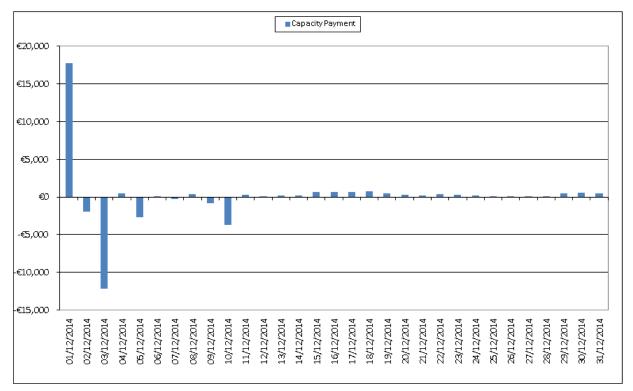

Figure 15 – All Generation Monetary Change for Capacity Resettlement – Dec 2014

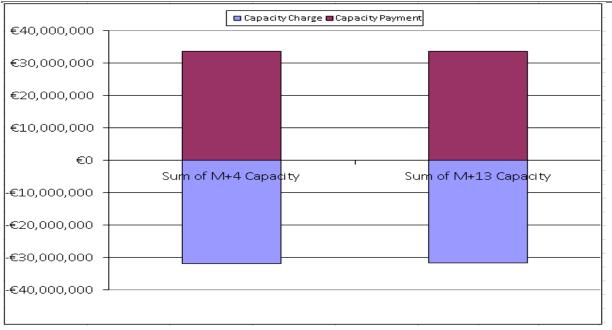

Figure 16 - Comparison of Distribution of Monetary Amounts between M+4 Capacity Resettlement and M+13 Capacity Resettlement – Dec 2014

The above graph demonstrates despite all the individual changes to payment and charge amounts on a Supplier or Generator Unit basis, the overall Capacity Market resettlement Charge and Payment amounts have not changed due to resettlement.

Definitions:

- Resolved within the Period refers to queries raised and resolved within the calendar month of January 2016.
- Resolved in the Period refers to queries resolved within January 2016, and includes queries raised before this time.
- Resolution Time (Working Days) refers to average time to resolve, in working days, for this category of query. It is calculated based on all queries for the category, not just January 2016.
- Not Resolved refers to queries raised but not resolved within January 2016.
- Urgent are general queries which may have an impact on market operations. SEMO has an internal objective to resolve these within 3 working days; however, this is not mandated service level under the Trading and Settlement Code.
- Disputes are where a dispute has been raised over the outcome of a data or settlement query.

The average resolution time for General Queries has increased by 0.14 working days from 1.06 in December 2015 to 1.2 working days in January 2016. SEMO has a metric to resolve General Queries within 20 Working Days. These include queries received over the phone and e-mail. There were no queries logged in January 2016 that took over 20 working days to resolve.

Data and Settlement Queries generally continue to be responded to within the timelines required by the Trading and Settlement Code, i.e. one calendar month. No Formal Query timeline extensions were required during January 2016 with regard to formal Settlement Queries.

## 5. Disputes and Queries

## 6. Central Systems

## 6.1 Proportion of Default Data Used

On review of the Commercial Offer Data used in the MSP runs, 69.28% of data used was submitted by Participants through the normal Bid-Offer process. 30.72% of the data used was based on Standing Commercial Offer Data. 0.0% of the data used was based on adjusted offer data. None of the data used was based on Default Commercial Offer Data (Default differs from Standing in that it is based on the initial Default data submitted during registration process and not on more recent Standing Data submitted by the Participant through the Market Participant Interface). Details by unit are provided in <u>Appendix F</u>.

#### 6.2 Proportion of Estimated Meter Data used in Initial Settlement and Resettlement

This is not calculable presently.

## 6.3 List of System Errors and Re-runs

## 6.4.2 MSP Algorithms

The Market Operator has two different certified solvers used to determine Unit Commitment. These solvers use the Lagrangian Relaxation (LR) and Mixed Integer Programming (MIP) methodologies.

The primary solver used in the SEM is Lagrangian Relaxation (LR). Under certain schedule outcomes where a significant pricing event is observed, the MSP software is re-run using the Mixed Integer Programming (MIP) solver. The outcomes of the two solvers are compared. Where solution determined using the MIP solver provides a better overall solution, this solution may be selected for publishing. An updated policy document on the use of MIP has been published and is available on the SEMO website <u>here</u>.

In January 2016, there were 6 instances of publishing with the MIP solver.

A detail of historical runs and dates where the MIP algorithm has been used for published results is provided in <u>Appendix I</u>.

### 6.4.3 Settlement Postings January 2016

The publication timings for Settlement runs are provided below.

## 6.5.2 Release SEM R2.8.0 (TBC May 2016)

SEM 2.8.0 cut-off date for participants was November 6<sup>th</sup> 2015:

So far one Change Request has been raised internally

• **CR351 Eligible Availability** - The PRE-ELIGIBLE-AVAIL and ELIGIBLE-AVAIL preprocessing modules in Pomax involve the calculation of a FACTOR value for each interval of the Trading Day. These values are then sorted in decreasing order for later use in the algorithms. The algorithm does not handle the scenario where the FACTOR calculation involves a division by zero. This change request requires that when this scenario occurs, the FACTOR value should be treated as a zero for the purposes of sorting.

Release scope was sent to RA and was approved on 1<sup>st</sup> February 2016. A deployment date has yet to be decided.

# 7. Occasional Components

## 16. Appendix I: MSP Algorithms

The Market Operator has two different certified solvers used to determine Unit Commitment. These solvers use the Lagrangian Relaxation (LR) and Mixed Integer Programming (MIP) methodologies.

The primary algorithm used in the SEM is Lagrangian Relaxation (LR). Under certain schedule outcomes this solution is compared to results achieved using MIP. The SEMO policy on the use of MIP has been updated and is available from the SEMO website <u>here</u>.

Historical information on runs and dates where the MIP algorithm has been used for published results is provided below.
