1 INTRODUCTION

During 2010, the RAs instigated the development of proposals in respect of Intra-Day Trading in the SEM. Through the Modifications Committee Working Groups, the High Level Design for Intra-Day Trading was developed and was recommended for approval by the Modifications Committee in Meeting 32.

The introduction of Intra-Day Trading in the SEM represents a major change in the market design. As a result, there will be a number of changes that will impact on the Trading and Settlement Code (“Code”), including:

- Bidding to multiple Gate Windows (EA1, EA2 and WD1) for the relevant Trading Day.
- Restriction of Interconnector Unit bidding in the EA1 Gate Window to Capacity Holders.
- Reallocation of unused Interconnector Capacity to any Interconnector Unit (with no requirement to be a Capacity Holder) in EA2 and WD1 MSP Software Runs.
- Different lengths of Trading Window for each Ex-Ante MSP Software Run:
 - EA1: entire Trading Day
 - EA2: entire Trading Day
 - WD1: second portion of the Trading Day
- Fixing of Interconnector Unit capacity allocations from EA1 MSP Software Run (MIUNs) in the EA2 MSP Software Run.
- Fixing of Interconnector Unit capacity allocations from EA1 MSP Software Run (MIUNs) and EA2 MSP Software Run (MIUNs) in the WD1 MSP Software Run.
- Changes to Credit Cover arrangements to ensure that the SEM remains as collateralised as possible.

This “Plain English Document” accompanies legal drafting for changes to the Code. Its purpose is to facilitate understanding of the legal drafting changes to the Code, in order that a single Modification Proposal may be discussed and approved via the Modifications Committee in late 2011.

2 SCOPE OF THIS DOCUMENT

In order to facilitate consideration of the proposed changes to the Code, SEMO will be developing and discussing changes in a number of key functional groups. Each functional group will have a Plain English Document (PED) and associated legal drafting, which will be considered via the Modifications Committee Working Group process.

Once the Plain English Documents (PEDs) have been considered and the legal drafting discussed via the Modifications Committee Working Group, SEMO will be producing a single Modification Proposal for discussion, vote and approval via a Modifications Committee meeting in late 2011.

The functional groupings in respect of SEM Intra-Day Trading are:

- **Functional Group 1** – Registration and Participant submissions
 - *FG1 Code and Agreed Procedure changes/additions are marked up as Tracked Changes, highlighted in the documents in **yellow**.*
- **Functional Group 2** – Other Data Transactions and MSP Software
 - *FG2 Code and Agreed Procedure changes/additions are marked up as Tracked Changes without highlighting.*
- **Functional Group 3** – Settlement and Credit Risk Management
 - *FG3 Code and Agreed Procedure changes/additions are marked up as Tracked Changes, highlighted in the documents in **cyan**.*

This Plain English Document covers the following Functional Group:

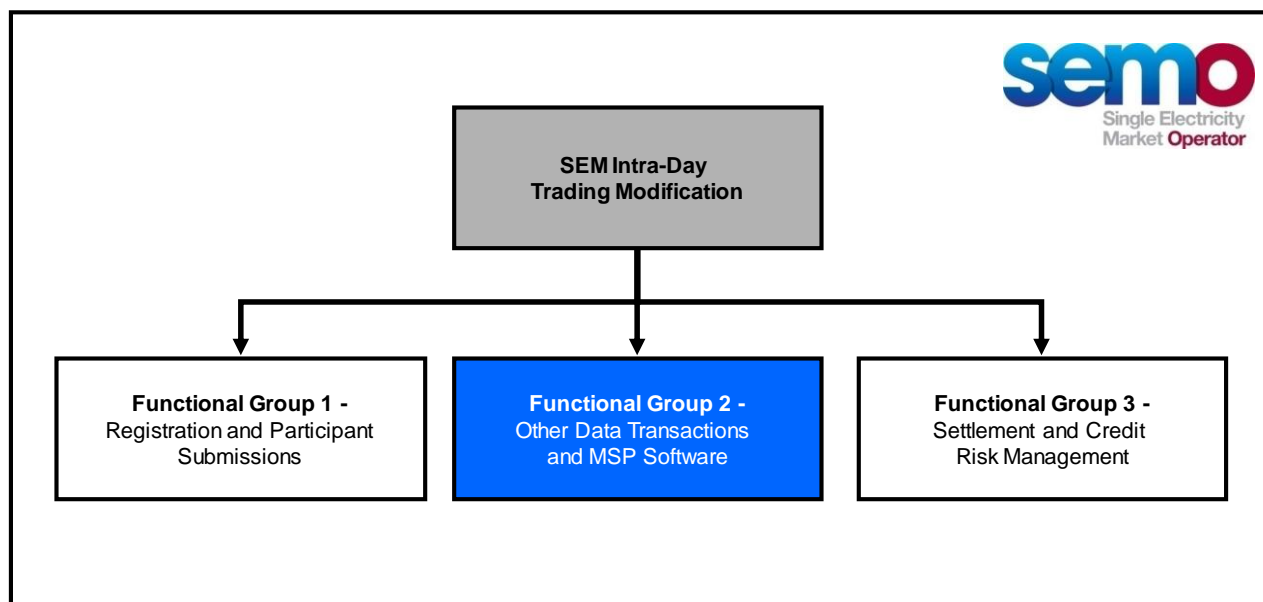

Figure 1 : Scope of this PED

Functional Group 2 covers the following sections of the Code:

Group Name	Sections Included
Other Data Transactions and MSP Software	<ul style="list-style-type: none">• Section 3 (Rules relating to Communications).• Section 4 (Submission and Transactions)• Section 5 (Interconnectors & bids/Data Transactions/MSP Software)• Section 6 (New provisions for Required Credit Cover Query)• Appendix D (Scope of Agreed Procedures)• Appendix E (Publications)• Appendix J (Market Operator and System Operator Data Transactions)• Appendix K (Data Transactions)• Appendix N (Operation of the MSP Software)• Agreed Procedure 2 (Treatment of Interconnector re: Intra-Day Trading).• Agreed Procedure 6 (Publication and Reporting).• Agreed Procedure 11 (Market System Operation, Testing, Upgrading and Support)• Agreed Procedure 13 (Query Generation)

3 STRUCTURE OF THIS DOCUMENT

Each Plain English Document has the following key sections:

- **Key Definitions** Describes the new or amended definitions required for the relevant Functional Group.
- **Description of Changes** By section of the Code (including Appendices and Agreed Procedures), and for each proposed change, defines:
 - PED Reference (unique reference to aid review and discussion).
 - Change Type (New – N, Amend – A, Delete – D).
 - Code paragraph(s) (in respect of Version 10.0 of the Code)¹.
 - Description (brief explanation of the proposed change).
 - Reference to relevant section(s) of the High Level Design for Intra-Day Trading (if any).
- **Appendices** Where required to support context and understanding of the Plain English Document, additional detail is included within appendices.

¹ Unless stated otherwise or a new paragraph, the primary reference is the existing v9.0 Code paragraph numbering. Where the reference numbering has been changed by the IDT Modification, the revised reference is also shown in parentheses – e.g. 5.160 (now 5.157).

5.8 APPENDIX K

5.8.1 DESCRIPTION

Appendix K details various Data Transactions transferred to or from the Market Operator and System Operators, Interconnector Administrators and Interconnector Users. Under Intra-Day Trading, the timing of various Data Transactions needs to change, in order to align with the EA1, EA2 and WD1 Gate Window Closures.

A summary of the proposed changes to Appendix K are as follows:

- The volume of changes is not extensive, with the majority of inbound Data Transactions unchanged.
- A new section has been added detailing how the Market Operator shall use Contingency Data in the event that the Data Transaction is not received within the timescales in the Code. Five Data Transactions have been identified which are critical to the operation of the SEM under Intra-Day Trading: Four Day Load Forecast; Wind Power Forecast; Interconnector Available Transfer Capacity; Active Interconnector Unit Capacity Holding; and Modified Interconnector Unit Nominations. In each case default rules are specified regarding the use of Contingency Data in the event of non receipt of a Data Transaction. This has proved necessary given that the introduction of Intra-Day Trading will amplify the SEM's dependency upon the receipt of timely Data Transactions and reduce any existing latitude for data to be received late. In particular, in the case of each of the five Data Transactions identified above, at least one Data Transaction must be submitted prior to the EA1 Gate Window Closure.
- A new section has been added detailing the new data Transaction for 'Proposed Interconnector Trades', introduced as a result of the implementation of Intra-Day Trading.
- Modification of the Data Submission Protocol for the Four Day Load Forecast Data Transaction to reflect the need to submit the Associated Data Transaction by the new EA1 Gate Window Closure.
- Modification of the Data Submission Protocol for the Wind Power Unit Forecast Data Transaction to reflect the need to submit at least one Associated Data Transaction by 30 minutes prior to the new EA1 Gate Window Closure and the change in the frequency of Data Transactions to ensure that the latest Wind Forecast Data is always available.
- Modification of the Interconnector Available Transfer Capacity Data Transaction as necessary to align with the new EA1 Gate Window Closure.

- Modification of the Active Interconnector Unit Capacity Holding Data Transaction as necessary to align with the new EA1 Gate Window Closure.
- Subheadings have been added to improve the structure and readability of Appendix K.
- Some clarifications and tidy-ups of other selected obligations, which are unaffected by the introduction of Intra-Day Trading. These changes have only been made where absolutely necessary – i.e. existing text was materially inaccurate, or confusing.
