1) Moyle TLAFs have been calculated using the I-SEM methodology for the full 2025-26 tariff year.

Changes between previous versions of this spread sheet are highlighted.	
---	--

Calculation of CLAF using CLAF Interval Definition Table

CLAF must be calculated for each Trading Period in the day, for all days in the Year for every Unit, based on TLAF and DLAF values.
In any settlement day, there are 5 possible CLAF Interval periods. The CLAF Calculation must take into account the following transitions:

- TLAF
- Day-time is from 7.00 a.m. to 10.00 p.m summer and winter.
 - The night period cover the remaining hours.
- DLAF
- Day-time is from 8.00 a.m. to 11.00 p.m summer and winter.
 - The night period cover the remaining hours.

The CLAF Interval Definition table is configurable to allow the transition times to be amended or aligned in the future.

- Interval-based CLAF Calculations:
- CLAF1 = TLAF (night) * DLAF (night)
- CLAF2 = TLAF (day) * DLAF (night)
- CLAF3 = TLAF (day) * DLAF (day)
- CLAF4 = TLAF (night) * DLAF (day)
- CLAF5 = TLAF (night) * DLAF (night)
