

**CMC\_10\_20**

**Change to F.4.1.1 for Capacity already Awarded  
within an LCC**

**CMC Workshop**

**23 July 2020**

# Reason for Modification

- Original CMC drafting did not require the SOs to determine capacity already awarded within an LCC but this is critical to understanding how much capacity will be bought in the auction
- It was not entirely clear that Locational Capacity Constraint Required Quantity was gross, i.e. before already awarded capacity is netted off (as occurs in F.8.2.1)
- F.4.1.1 had very different invocation to F.3.1.1 (for the related determination of the Demand Curve)

# Drafting changes

- Opening text of F.4.1.1 modified to more closely mirror F.3.1.1, allowing the RAs to request the SOs to make determinations.
- New sub-paragraph (f) added to determine the capacity already Awarded for CMUs within an LCC.
- Trailing sentence added to make absolutely clear that Locational Capacity Constraint Required Quantity is gross, i.e. prior to adjustment for capacity already Awarded.
